SilTite™ FingerTite Ferrules

Description	Pack Size	Part No.
SilTite™ Fingertite Shimadzu 2010 INJ / FID Starter Kit	*	073620
SilTite™ Fingertite Shimadzu 2010 INJ / MS Starter Kit	*	073621
SilTite™ Fingertite Ferrule 0.4 mm	Replacement Items	10
SilTite™ Fingertite Ferrule 0.5 mm	Replacement Items	10
SilTite™ Fingertite Blanking Ferrule	Replacement Items	2
SilTite™ Fingertite Female Nut	Replacement Items	5

* Each starter kit includes all the parts necessary to convert one GC system (one injector and one detector) to the SilTite™ FingerTite system suitable for installing 0.1 – 0.25 mm ID capillary columns. In addition there are 5 SilTite™ FingerTite nuts, one packet (10 ferrules) of 0.4 mm ID SilTite™ FingerTite ferrules and a ferrule install tool which allows you to seat the ferrule in the correct position on the capillary column.

Our Website

www.sge.com is a detailed source for information on chromatography, applications and SGE products. It also profiles the latest posters and technical materials generated by our technical experts based around the world.

50 Years Edition Product Selection Guide

Our product selection guide can be accessed at www.sge.com/selectionguide

Your chromatography analysis does not end with the selection of the GC column! The combination of components selected for your instrument also make an important contribution to successful separations. SGE brings technology and chromatography expertise to everything the sample touches.

Injector to Detector - SGE Supplies for Sample Preparation, Sample Introduction, Separation and Detection

SAMPLE INTRODUCTION - Syringes

SGE's involvement in all areas of Chromatography provides us with a unique understanding of customer's requirements enabling us to optimize syringe design for sample introduction.

All SGE syringes for both manual and autosampler use incorporate SGE's new Diamond Syringe Technology offering significantly improved levels of durability, clarity and accuracy. No other syringe range provides such brilliance! SGE has a comprehensive range of syringe options including plunger protection, removable or fixed needles, a range of needle gauge and length options as well as needle-tip style alternatives.

SAMPLE INTRODUCTION - GC Inlet Liners

The GC Inlet liner is where the sample is introduced and vaporized into the gaseous phase. The design of the liner is crucial, as is liner deactivation, to ensure reproducible and accurate chromatography.

SEPARATION - GC Connections

(ferrules and fittings)

SGE manufactures an array of connection types for GC use. Poorly defined or selected connections can lead to an increase in dead volume, leaks from cycled temperatures and mismatched tubing sizes.

SAMPLE INTRODUCTION - Septa

The role of septa for GC analysis is key with many chromatographic problems caused as a result of inappropriate septa material or inappropriate handling of the septa.

Desired septa attributes:

- Must reliably seal against the carrier gas pressure in the inlet.
- Must be capable of being pierced by the syringe needle without pieces of the septa being deposited in the GC inlet system, which would be catastrophic to the chromatography.
- Must be capable of being pierced and resealed time after time.
- Must not be allowed to be contaminated or bleed material into the chromatographic system.

DETECTION - ETP Electron Multipliers

ETP electron multipliers from SGE are the most advanced high performance detectors available today.
